1. Calculated Fields

Field	Formula	Explanation
es_ingreso	CASE WHEN propuesta_ingreso = "Si" THEN 1 ELSE 0 END	Converts the propuesta_ingreso flag to 0/1 so AVG can calculate the admission rate overall or by service.
tiempo_hasta_triaje_min	DATETIME_DIFF(fecha_triaje, fecha_llegada, MINUTE)	Minutes from the patient's arrival at the emergency department until triage. Answers: How long does it take to classify patients?
tiempo_hasta_asignacion_min	DATETIME_DIFF(fecha_asignacion, fecha_llegada, MINUTE)	Minutes from the patient's arrival until their first medical assessment.
tiempo_estancia_min	DATETIME_DIFF(fecha_salida, fecha_llegada, MINUTE)	Total time in minutes from arrival until discharge. Used as one of the three selectable time measures in the Tiempo parameter.

2. Parameter

Field	Formula	Explanation
Time (parameter)	Type: Text | Values: "hasta triaje", "hasta atención", "de estancia" | Default: "hasta triaje"	A dropdown parameter controlled on the dashboard. It selects which time measure appears in the "Time by triage level" chart, avoiding the need for three separate charts.
metrica_tiempo_seleccionada	CASE WHEN Tiempo = "hasta triaje" THEN tiempo_hasta_triaje_min WHEN Tiempo = "hasta atención" THEN tiempo_hasta_asignacion_min WHEN Tiempo = "de estancia" THEN tiempo_estancia_min END	Reads the selected Tiempo parameter value and returns the corresponding time measure in minutes. The result is used as the average metric in the bar chart by triage level (Levels I–V).

3. Key Performance Indicators

Field	Formula	Explanation
Visit count	COUNT(id_urgencia) [aggregation: Record count]	Number of emergency visits within the selected period and filters. Together with the time-series chart, this answers how visit volume changes over time.
Mean time to triage (min)	AVG(tiempo_hasta_triaje_min)	Average time, in minutes, from arrival until the hospital classifies (triages) a patient.
Mean time to first assessment (min)	AVG(tiempo_hasta_asignacion_min)	Average time, in minutes, from arrival until a patient receives their first medical assessment.
Admission rate	AVG(es_ingreso) [formatted as a percentage]	Percentage of emergency visits that result in a hospital admission. Answers what share of visits lead to an admission.
